

### ASVAB Re-norming Needs Assessment: Identifying the Need for and Approaches to Re-norming the ASVAB Prepared for DACMPT

Presenter: Pamela Baumer

**December 15, 2022** 

HumRRO Headquarters: 66 Canal Center Plaza, Suite 700, Alexandria, VA 22314-1578 | Phone: 703.549.3611 | www.humrro.org

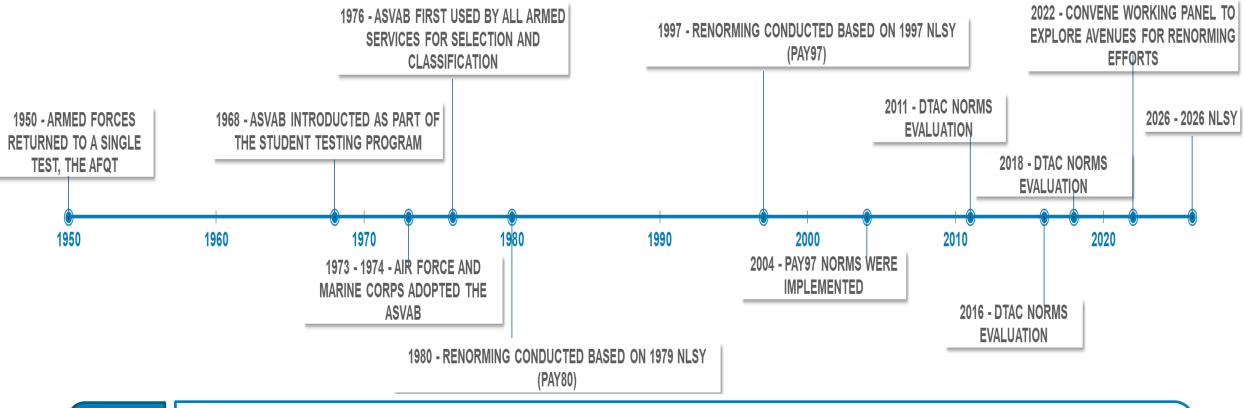

# Establish updated national norms for the ASVAB:

- Indicate when new norms are necessary
- Research norming needs and possible avenues to renorming

## Brief History of Norming the ASVAB

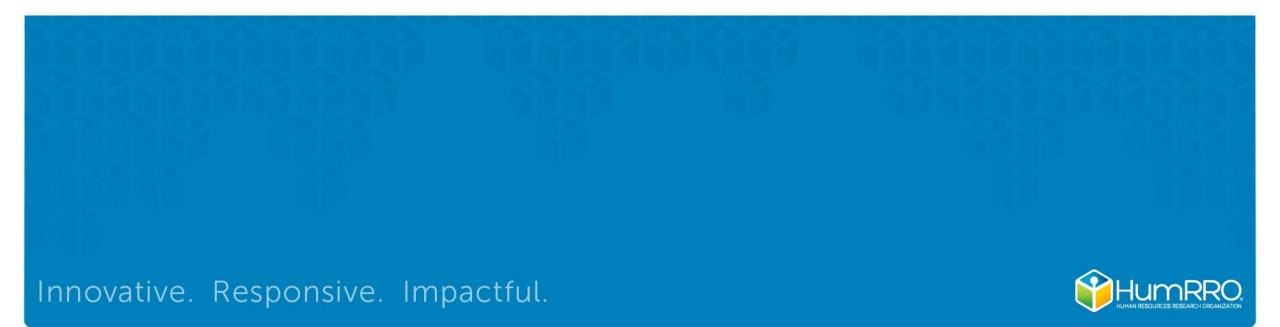

- When should norms be updated?
- What norming methods are available to take advantage of lessons learned throughout the history of norming the ASVAB?

Innovative. Responsive. Impactful.

## Current Norming Efforts: When should norms be updated?

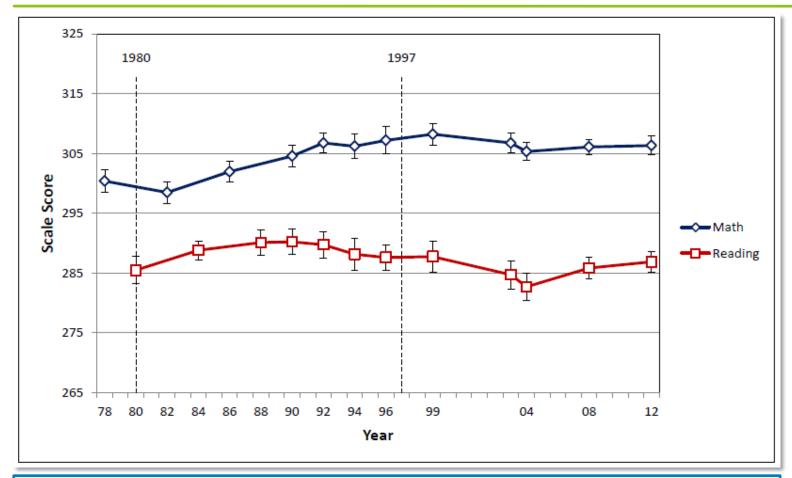

## When should norms be updated? Call to Action

The July 2017 Defense Advisory Committee indicated that it is not the *age* of the norms, but the validity of the norms and the changes in the norming group that are most important to consider:

- Validity
  - Does the norming group represent the target population?
  - Are the norms based on valid methodology?
  - Have changes in the population caused the ASVAB to not measure the same things as in 1997?
- Norming group
  - Are there changes in abilities?
  - Are there changes in demographics?
  - Will changes in demographics and ability levels have a <u>meaningful</u> effect on AFQT scores?

## Are there changes in abilities?

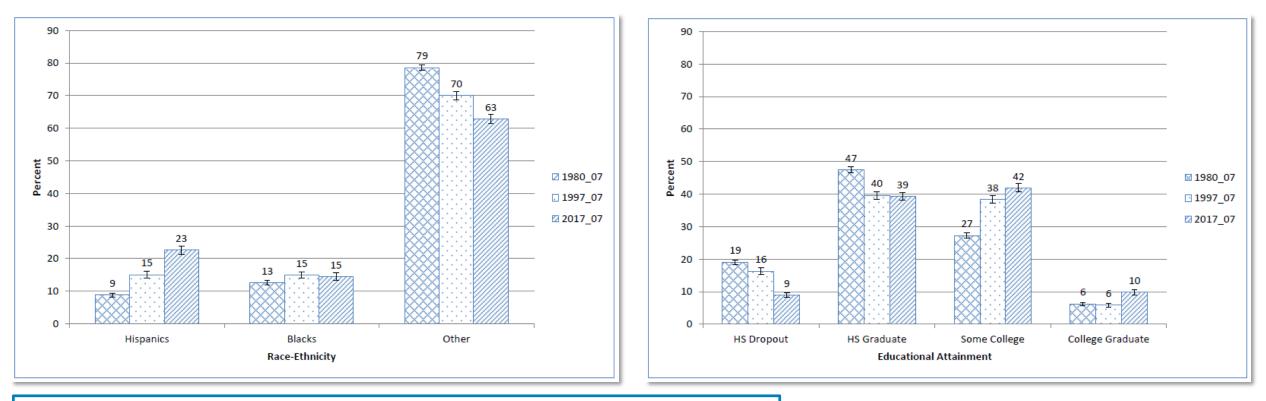

National Assessment of Educational Progress Long Term Trend Test (LTT)

- Last administered to 17-year-olds in 2012
- Moderate increases in NAEP Math and Reading for Black and Hispanic youth yielded a small increase for the total population in 1996
- Changes from 1998 to 2012 are negligible

SOURCE: National Assessment of Educational Progress (NAEP), Long-Term Trend Mathematics Assessments. The original assessment format, content, and procedures were revised minimally in 2004 to provide accommodations to students with disabilities and English language

### Are there changes in demographics?

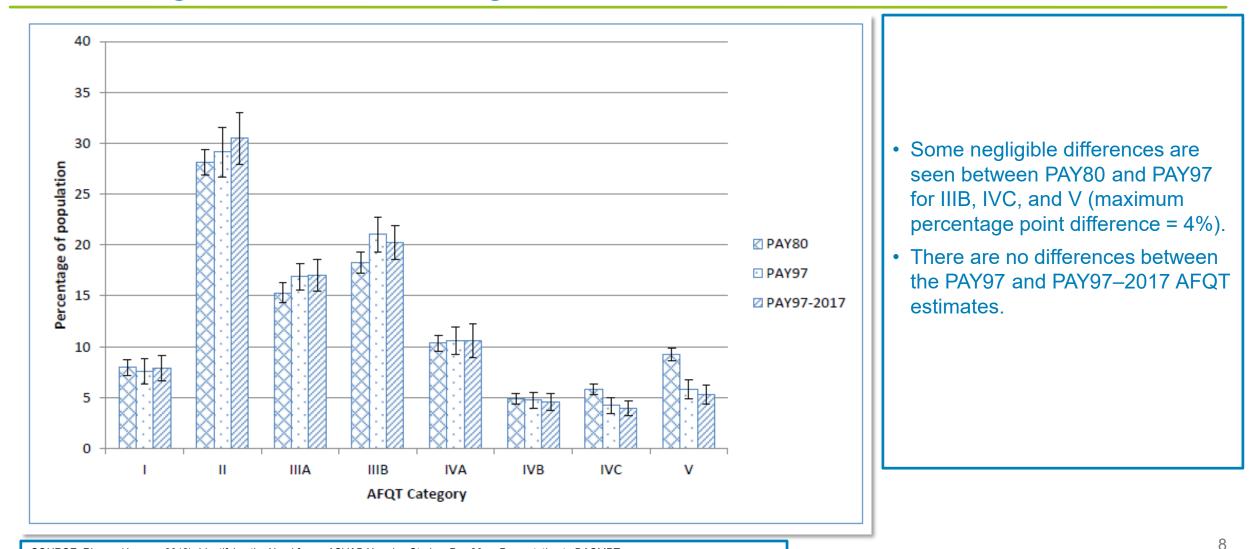

SOURCE: Current Population Survey (CPS) data downloaded from the Integrated Public Use Microdata Series (IPUMS-CPS, University of Minnesota, www.ipums.org)

#### Innovative. Responsive. Impactful.

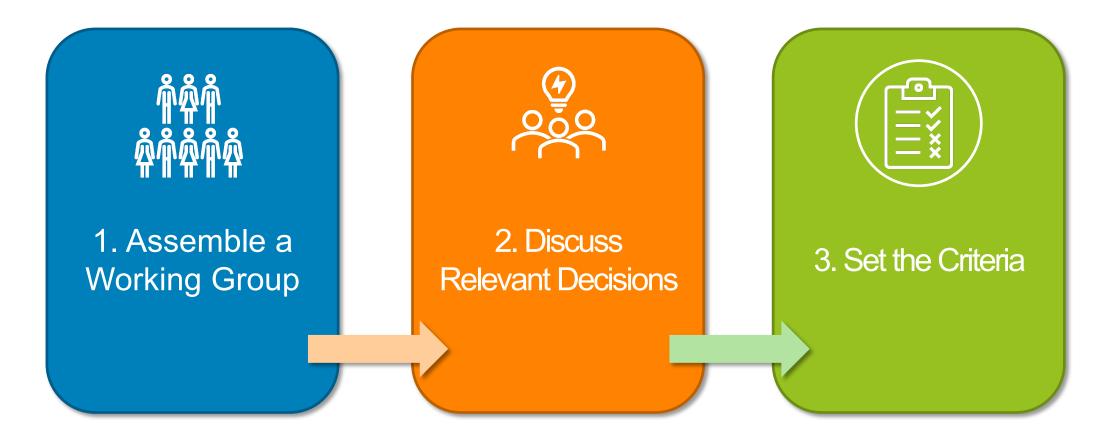

## Do changes have a meaningful effect on AFQT?

SOURCE: Riemer (January 2018). Identifying the Need for an ASVAB Norming Study – Pay 20xx. Presentation to DACMPT

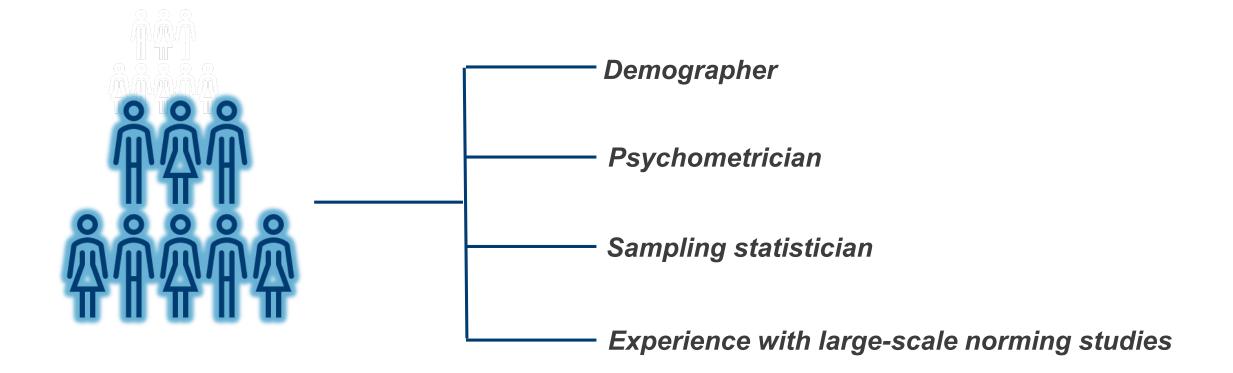

## How should we approach this task?

Rather than every 4 years, DTAC would like to see an annual estimate of changes in ability and demographics and how those impact the AFQT estimates

Innovative. Responsive. Impactful.

## Approach: Discuss Relevant Decisions

DAC: Which factors will be most difficult to account for when estimating ability change for groups where no data are available?

What data are going to be most useful for us to estimate ability change and impact on ASVAB norms over time?

How should we estimate ability change and impact on ASVAB norms for subgroups without data?

How can the data be clearly and concisely presented to make decisions?

11

What amount of change would be needed to justify the expense of conducting a new norming study?

Statistical significance

DAC: How would you define "meaningful" change in AFQT scores that should trigger new norming efforts?

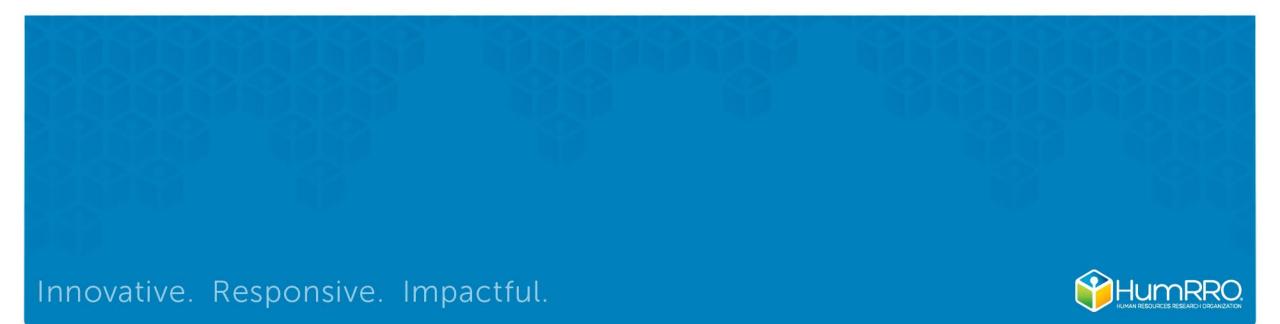

Consistent multi-year change

Historical criteria

Humpresources research organization

12

## Current Efforts: What norming methods are available?

## What norming methods are available? Call to Action

#### What we learned from PAY97:

- The PAY97 eligible response rate was 77%, which was lower than for PAY80
  - Particularly underrepresented Hispanic population
- The PAY97 educational level estimates were dramatically higher than expected

## **Norming Method Options**

Bureau of Labor Statistics is developing a needs assessment for methods and research questions for a 2026 National Longitudinal Survey of Youth (NLSY26)

- Included an expert panel on how to partner with Department of Defense on measures of cognition, personality, and career interests of youth
- Currently considering a similar arrangement to previous efforts

## Norming Method Options (continued)

## **Available Methods**

- Strengths and weaknesses
- -Cost
- -Relevant research studies

## Considerations

- -Sampling
- Communication
- -Data collection
- -Data analysis

## Questions for the DAC

- What thoughts do you have on which factors will be most difficult to account for when estimating ability change for groups where no data are available?
- How would you define *meaningful* change in AFQT scores that should trigger new norming efforts?
- Aside from large-scale studies similar to those already conducted, what are some other ways that norming data can be collected?

How can we take into consideration the impacts of the COVID-19 pandemic on educational achievement?

## **Questions?**

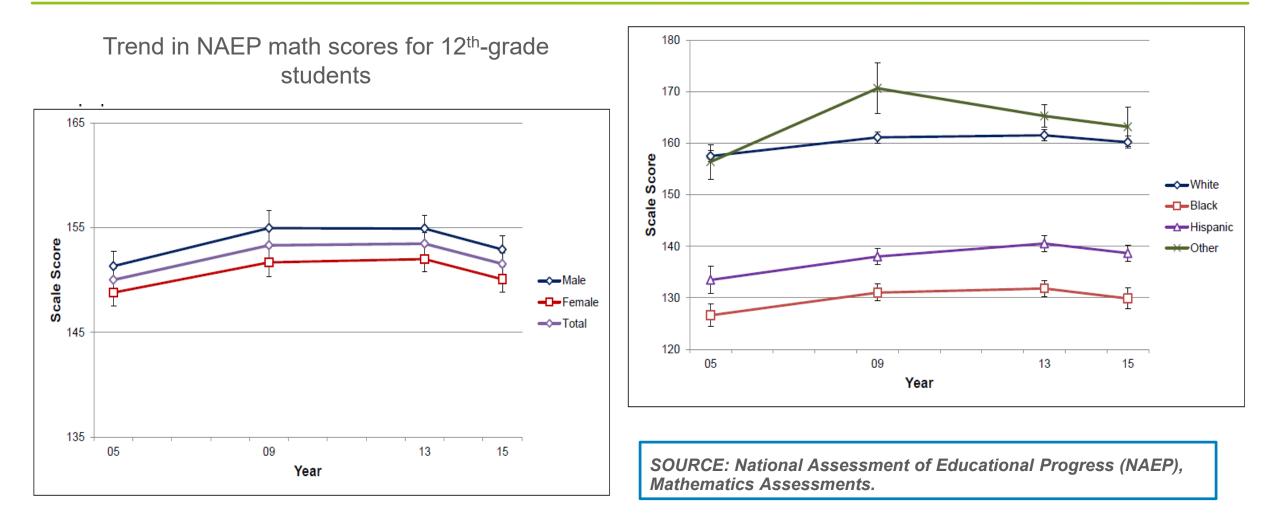

## **Additional Information**

Innovative. Responsive. Impactful.

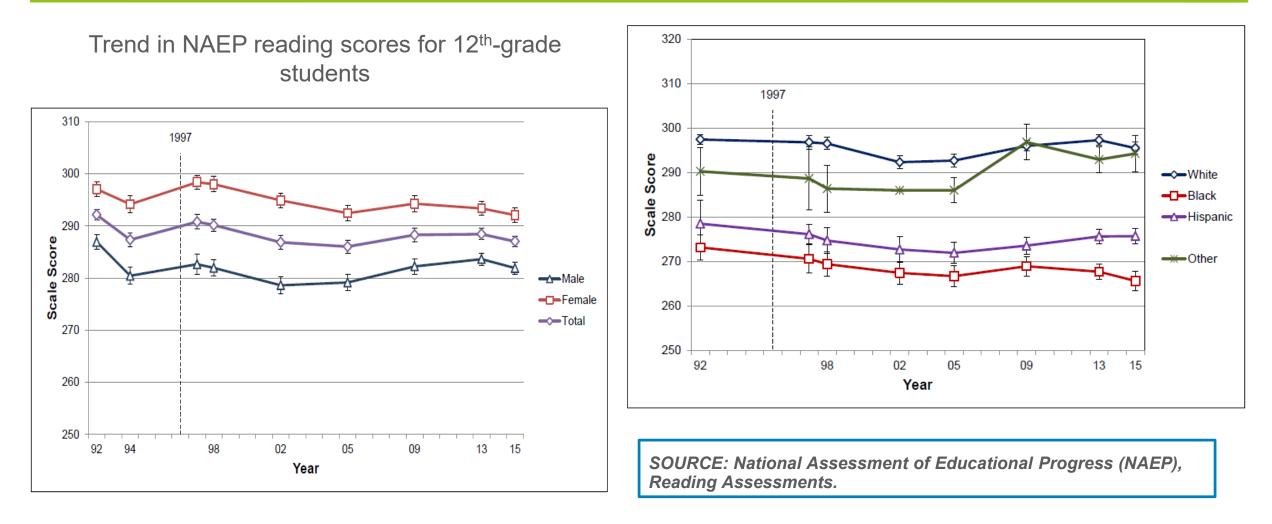

## Are there changes in abilities?

#### Innovative. Responsive. Impactful.

## Are there changes in abilities?

#### Innovative. Responsive. Impactful.

Applicant counts and percentages by age for 1997, 2010, and 2014 populations

| AGE      | 19      | 1997 2010 |         | 2014 |         |     |
|----------|---------|-----------|---------|------|---------|-----|
|          | Count   | %         | Count   | %    | Count   | %   |
| 16-17    | 97,320  | 25        | 49,883  | 16   | 45,378  | 21  |
| 18       | 95,402  | 24        | 66,172  | 21   | 55,435  | 26  |
| 19       | 60,122  | 15        | 46,640  | 15   | 31,965  | 15  |
| 20       | 37,580  | 10        | 33,120  | 11   | 20,751  | 10  |
| 21       | 25,200  | 6         | 24,531  | 8    | 15,010  | 7   |
| 22       | 18,383  | 5         | 19,315  | 6    | 12,009  | 6   |
| 23       | 13,482  | 3         | 15,693  | 5    | 9,545   | 4   |
